BALANCING NEEDS!**

**Dyna-Bal DBCE101
Computerized
Electronic System**

Computerized balancing unit
for the shop

Upgrade your existing balancing machine. The DBCE-101 has been designed to help companies produce a faster balancing job, provide quality controlled balancing, provide a printout of each balance job and ease of training new employees.

**EXTEND YOUR PRODUCTIVITY
WITH THE
DYNAPower 2000
PORTABLE BALANCING UNIT**

Portable balancing is made easy with our Dyna-Power 2000 field unit. This unit does 1 or 2 correction planes and discrete weight balancing. It is practical for "in-shop or field balancing." Readings are given in displacement units and velocity. It calculates permissible unbalance based on grade spec, and operating speed. It also calculates the correction weight, trim balance weights and generates reports. Plus it stores multiple jobs for later recall.

DYNA-BAL OPTIONAL EQUIPMENT AND SUPPLIES

Dyna-Weight Epoxy
Balancing Clay
Belts
Mini-Frame
Strobe Light

Longer Centers
